Lester Snow
Executive Director, CALFED
1416 Ninth St
Sacramento, CA 95814

Dear Mr. Snow,

I've become aware of CALFED's proposals for increased water storage in the Central Valley, by increasing depth of existing dams or building new ones.

The impact on species through destruction of habitat or damming of rivers is very concerning. Significant disruptions to river flow will cause great difficulty for the animals there. Greater water efficiency - agriculture & domestic is greatly to be preferred over simply supplying water to cover our wasteful practices.

Regards
Daniel, 628 Central Ave, Menlo Park CA
