After having been introduced to several of CALFED's water storage plans, I must urge you to reconsider the plans to raise the level of Shasta Dam. This plan could cause drastic and irreperable damage to much of the Sierra/Bay Area watershed.

I would urge, instead, a more efficient use of water, a better use of a monitoring system in the Central Valley and a switch to more drought tolerant crops.

There is little time to stop the assault on our water resources and take action to preserve waterlife, wildlife & our ecosystem. Please consider alternatives to damming as a solution. Thank You-

Elaine Chodd.
