Dear Mr. Snow -

I am a resident of the State of California and live in San Francisco. I enjoy the natural beauty of Northern California. Therefore I OPPOSE CALFED'S PLAN TO INCREASE THE SURFACE WATER IN THE CENTRAL VALLEY. I oppose the building of any more dams or new off stream storage reservoirs. The current plan would build more dams and divert water from the Sacramento River. I support proposed restoration goals - these could be achieved not by building more dams but

rather by less intrusive conservation measures. For example removing the Englebright dam, acquiring riparian habitat and increasing instream flows for fish and wildlife would increase water quality without destroying the environment. Our natural resources are important to our life quality and future generations. Please take small incremental steps and avoid large intrusive project that might harm or radically alter our environment.

Thank you for your consideration in this matter.
