8/21/99

Lester Snow
Executive Director, CALFED
1416 Ninth St.
Sacramento, CA 95814

Dear Mr. Snow:

Please consider this letter a response to the revised CALFED plan. I oppose CALFED's plan to increase surface water storage in the Central Valley by raising existing dams or building new offstream storage reservoirs. I urge CALFED to expand water efficiency, conservation, and reclamation programs, as well as implement economic disincentives to the use of water by agriculture and by new developments.

Water meters need to be required for all users in the State located in urban or suburban areas.

I support CALFED's proposed restoration goals, including removing existing facilities, acquiring important riparian habitat, and increasing instream flows.

Thank you for your time and consideration.

Sincerely,

Joel P. Franklin
