To CALFED & specifically, SEP 13 1999 8/28/99
Lester Snow, Executive Director,

I oppose CALFED's plan to increase surface water storage in the Central Valley by raising existing dams or building new offstream storage reservoirs, in particular, raising Shasta dam (height).

I urge CALFED to make do with what we have already, to expand water efficiency, conservation, and reclamation programs, and to stop building new dams and canals. I support CALFED's proposed restoration goals for the Central Valley, specifically eliminating some old dams. We need to solve our ecological problems and water supply problems (of this state) by halting the building of more new dams, and in fact, eliminating some old dams.

Sincerely,
Tom Gross.
